

LoopWriter® Software

Make learning fun

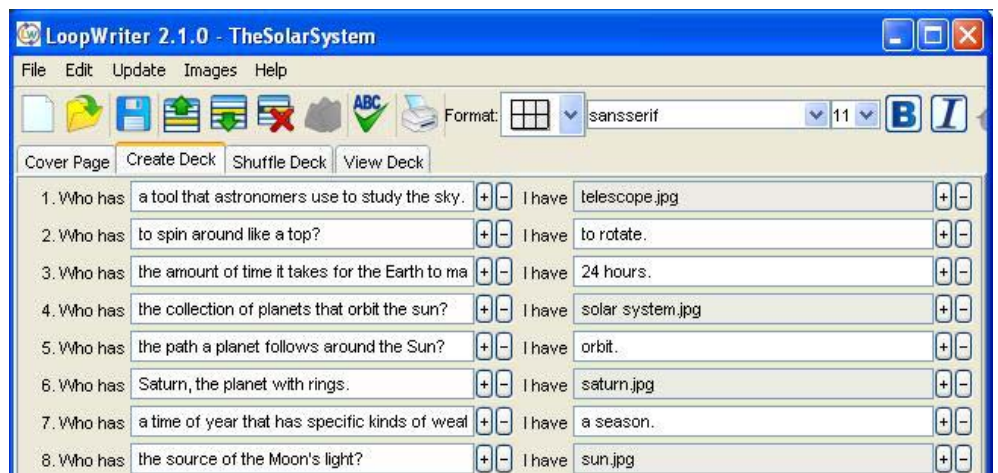

LoopWriter is an inexpensive, teacher-friendly software program for creating interactive card games that help students learn their subject matter and have fun at the same time. It is as simple as entering questions and answers, and the software does the rest. In fact, it is so easy to use that many teachers have their students create

questions and answers to make loop games of their own. You may be familiar with the term loop game, or you may know it by its other name, “I have./Who has?”

Develop your own custom games

LoopWriter is used by teachers of all grade levels and subject areas. Often times, teachers collaborate with others in their grade or department to share games, making the simple process of game development even more time efficient. Below is a description of how simple the process really is:

Step 1: Type in your questions and answers.

Step 2: “Shuffle” the questions/ answer combinations to ensure that the game challenges your students.

Step 3: Select how your deck of cards will print. Four cards per page? Six cards per page? Etc.

Step 4: Spell check and print your deck. Now, you are ready to facilitate a lesson in which students really enjoy the learning process.

LoopWriter benefits for teachers and students include:

- Every teacher knows that when students are having fun during a lesson, the depth of learning is improved.
- Depth of learning translates into success for the teacher and the students.

Teachers can:

- Achieve higher passing rates on quizzes and tests as students become absorbed in your most important content.
- Enjoy an engaging environment where students collaborate and are focused.
- Establish the type of classroom where students *want* to work and contribute.

Students can:

- Feel great about knowing answers during class discussions, quizzes and tests.
- Practice higher level thinking and decision making as related to core content.
- Develop skills of collaboration through interacting with classmates.

LoopWriter adds fun to teaching and learning

Every teacher knows that when students are having fun during a lesson, the depth of learning is improved. Depth of learning translates into success for the teacher and the students.
